Real Estate Settlement Procedures Act (Regulation X); Escrow Accounting Procedures

Correction

In final rule document 95-3683 beginning on page 8812 in the issue of Wednesday, February 15, 1995, make the following corrections:

On page 8813, in the third column, in paragraph (i.) the formulas for computing the CPI were inadvertently omitted, and should appear as follows:

(i.) [Page 53904, § 3500.17(c)(7).] How does a servicer compute the Consumer Price Index (CPI) adjustment factor to estimate disbursements?

Answer: This factor is the ratio of the monthly CPI for all urban consumers, all

items, reported most recently, to the same monthly CPI reported 12 months earlier; i.e.:

$$\frac{\text{most recent monthly CPI}}{\text{monthly CPI for same month 12 months earlier}}$$

The adjustment is made by multiplying last year's disbursement by this ratio. For example, if last year's school tax bill was \$827, the value of the most recent CPI (September 1994) was 149.4, and the value of the CPI in September 1993 was 145.1, then the school tax projection using this technique may not exceed \$851.51:

$$\$827 \times \frac{149.4}{145.1} = \$851.51$$

The two CPI numbers must have the same base period and must either both be seasonably adjusted or both be not seasonably adjusted.
